Due to continuous development of our products, the AR5000A has been enhanced in several areas. The upper frequency range has been extended to $3.0 \mathrm{GHz}(3000 \mathrm{MHz})$ and the ACC1 audio is now squelch controlled making the revised model suitable for voice activated tape recording. The motor control is retained making the compatibility even wider.

- Frequency range 10 kHz to 3000 MHz
- ACC1 configuration has been amended with audio out now being squelch controlled

The following comparison chart between the AR5000/AR5000+3 and AR5000A/AR5000A+3 provides cross referencing to the specific page numbers of the operating manual:

| Item | AR5000/AR5000+3 | AR5000A/AR5000A+3 | Page number |
| :--- | :--- | :--- | :--- |
| Frequency coverage | $10 \mathrm{kHz}-2600 \mathrm{MHz}$ <br> low level audio not <br> squelch controlled | $10 \mathrm{kHz}-3000 \mathrm{MHz}$ <br> audio squelch <br> controlled with mute | P.76 |
| ACC socket Pin 4 \& 5 7 | Tape motor <br> switching contact | Tape motor <br> switching contact <br> still available but not <br> needed when voice | P.10 |
| activated tape |  |  |  |
| recorders are used |  |  |  |$\quad$.

## REASSIGNMENT OF ACC1 SOCKET

The AR5000A/A +3 provides squelch controlled audio output to pin 7 of the ACC1 connector. Tape motor control may still be used to pins $4 \& 5$. The audio levels have been revised, please refer to the information here and page 10 section 5-11 of the operating manual.

Pin 8 Ground

## CR5000 TAPE LEAD

The optional tape connecting lead CR5000 may still be used as switched audio will be provided via the 3.5 mm mono jack plug of the lead, however if you are using a voice activated tape recorder, the 2.5 mm mono jack plug previously used for tape motor switching does not have to be used.

## SPECIFICATION

The specification shown below replaces that printed on page 76 section 22 of the operating manual.

## Model

Frequency range
Tuning
Modes
I.F frequencies

Standard fitted filters
Memory channels
Search banks
Memory scan speed
Search speed

PASS frequencies
Priority

External reference
Operating temperature
Frequency stability
Aerial input

Audio output (13.5V)
Power requirements
Size
Weight

AR5000A / AR5000A+3
10 kHz ~ 3GHz Cell-blocked in the USA for FCC rules
NCO 1Hz ~ 999.999999kHz
AM, FM, USB, LSB \& CW +3 includes Sync AM
1st I.F. 622.0 / 622.4 MHz , 2nd I.F. 10.7 MHz, 3rd I.F. 455 kHz
$3 \mathrm{kHz}, 6 \mathrm{kHz}, 15 \mathrm{kHz}, 30 \mathrm{kHz}, 110 \mathrm{kHz} \& 220 \mathrm{kHz}$ (provision for 500 Hz option)
1000 (100ch x 10 bank) TWCE
20 banks TWICE
25 channels per second in standard mode, 45 channels per second (max) in Cyber Scan
25 increments per second in standard mode, 45 increments per second (with step size of 100kHz or less) in Cyber Search
2100 total TWICE ( 21 banks x 100 ch inc VFO)
1 channel
10.7 MHz with maximum, $\pm 5 \mathrm{MHz}$ bandwidth
10.0 MHz input
$0^{\circ}$ to $+50^{\circ} \mathrm{C}$
$\pm 2.5 \mathrm{ppm}\left(0^{\circ}\right.$ to $\left.+50^{\circ} \mathrm{C}\right)$
50 OHM unbalanced.
N-TYPE \& SO239
1.7 WATT into 8 OHMS @ 10\% THD
nominal 13.5 V d.c. $(12 \sim 16 \mathrm{~V}) @ 1 \mathrm{~A}$ approx with 1 W audio output
$217(\mathrm{~W}) \times 100(\mathrm{H}) \times 260 \mathrm{~mm}(\mathrm{D}) \mathrm{mm}$ approx excluding projections
3.5 kg

Selectivity - IF filter bandwidth table

| Filter kHz | Total nose <br> (b' width |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| $0.5(500 \mathrm{~Hz})$ opt | 0.5 | -3 | 2.0 | -60 |
| 2.5 opt | 2.5 | -3 | 5.2 | -60 |
| 3 | 2.3 | -6 | 5.0 | -50 |
| 5.5 opt | 5.5 | -3 | 11.0 | -60 |
| 6 | 6.0 | -6 | 20 | -50 |
| 15 | 14 | -6 | 30 | -50 |
| 30 | 27 | -6 | 70 | -50 |
| 110 | 90 | -6 | 450 | -50 |
