## Operation Manual

## Tristar 797 200 Channel Mobile 5-Mode Transceiver

## General Description

The TRISTAR 797 is a combination transmitter-receiver designed primarily for mobile use. It employs the very latest technology to provide 200 channels of operation by means of digital frequency synthesis with PLL (phase-locked-loop) circuitry. The use of PLL assures a precise on-frequency operation on every channel in both transmit and receive mode. The TRISTAR 797 also includes many other features which will provide greater operating convenience and assure optimum communications under a wide range of conditions.

Operable on 200 channels divided into five groups of 40 channels. 3-way RF Gain switch.
Full noise reduction features - ANL and noise blanker.
5 modes of operation - CW, LSB, USB, AM, or FM - selectable with a rotary switch.
Provision of PA.
Concentrically mounted Fine and Coarse controls to fine tune to any transmissions or operate in inter-channel frequencies.
Tone switch to select receive tonal quality in 2 -way.
RF power output switchable in 3 -way for required communication range.
TX lamp that indicates you are on-the-air.
External speaker jack for an extra sound source.
Electrically floating chassis for negative or positive ground operation without switching.
A high-sensitivity dynamic microphone equipped.

## CAUTION

FOR REPLACEMENT OF THE FUSE
IN DC POWER CABLE, PLEASE BE SURE
TO USE 3,5A FUSE.

## Specifications

## General

Frequency composition. PLL synthesizer
Frequency range. $A-26.065$ to 26.505 MHz
B -26.515 to 26.955 MHz
C -26.965 to 27.405 MHz
D - 27.415 to 27.855 MHz
$\mathrm{E}-27.865$ to 28.305 MHz
Channels. 200
Frequency space. $\quad 10 \mathrm{kHz}$
Emission. AM/FM/USB/LSB/CW
Power source. 13.8V DC

## Receiver

Sensitivity. $\quad A M-1$ micro-V @ 10 dB S/N
FM - 1 micro-V @ 20 dB S/N
SSB/CW - 0.5 micro-V @ $20 \mathrm{~dB} \mathrm{~S} / \mathrm{N}$
Selectivity. 60 dB
Audio Output. $\quad 2 \mathrm{~W} @ 8$ Ohm
Fine Tune range. $\pm 800 \mathrm{~Hz}$
Coarse Tune range. $\pm 5 \mathrm{kHz}$
Squelch range. $\quad 0.5$ to 300 micro-V
Intermediate
frequency. $\quad \mathrm{AM} / \mathrm{FM}-10.695 \mathrm{MHz} / 455 \mathrm{kHz}$
SSB/CW - 10.695 MHz

## Transmitter

| RF power output. |  | High | Mid | Low |
| :--- | :--- | :--- | :--- | :--- |
|  | SSB/CW | 12 W | 8 W | 2 W |
|  | AM | 7.5 W | 4 W | 1 W |
|  | FM | 10 W | 7 W | 2 W |

SSB generation. Double-balanced modulator with crystal latice filter
Coarse Tune range. $\pm 5 \mathrm{kHz}$

## Operating Controls and Features

(1) Off/Volume Control

Varies the sound output from the speaker. Also incorporates an on-off switch at the extremely counterclockwise position.

## (2) Band Selector

Selects a group of 40 channels in five positions - A, B, C, D, or E (200 in all).

## (3) Squelch Control

Used to eliminate any annoying background noise when no signals are present. The degree of sensitivity to incoming signals is adjustable. When the Squelch control is rotated to the fully clockwise position, it provides maximum squelch; in the fully counterclockwise position, it provides minimum squelch.
(4) Mode Selector

Selects the mode of reception and transmission - CW (continuant wave), LSB (lower side band), USB (upper side band), AM (amplitude modulation), or FM (frequency modulation).

## -(5) Fine/Coarse Control

This is concentrically located control that permits individual adjustment of receiving and/or transmitting frequencies.
INT. Fine (inner knob). Provides fine tuning of the receiver section. On regular AM and FM reception, this will permit adjustment to off-frequency transmissions. In the SSB (either upper side band or lower side band) mode, this is used as a voice clarifier to adjust for clearer voice reception. This control will not affect the transmitter frequency.
$\therefore$ CT Coarse Tune (outer knob). This control operates in the same manner as the Fine knob except it provides adjustment of both receive and transmit frequencies.
(6) Channel selector.

A 50 -detent rotary switch to select any of 200 channels in conjunction with the Band Selector switch.
Window above this switch indicates the channel selected using an LED (Light-emitting-diode) digital readout.
(7) TX indicator

Lights up when transmitting.
(8) Channel indicator

A digital LED display to show channel selected.
Turned off when operating PA.
(9) Power Selector

Enables you to select the RF power output of the transceiver in 3 ways:
High. In this position the transceiver produces full rated RF power for maximum communication range.
Middle. In this position, the RF power is medium level.
Low. In this position, the minimum RF power output is obtained, may be used for short range communication.
Note. The RF power output level (W) which each position provides is dependent on the mode of operation. See Specifications section for specific RF power output.

## (10) Tone Switch

Changes tonal quality in receiving in 2 ways:
High. High tones in the sound output are emphasized.
Low. Low tones in the sound output are emphasized.
(11) CB-PA switch

When set to PA (lever down) position, the transceiver acts as a public address amplifier. Before operating PA, you must first connect an external PA speaker ( 80 hm , more than 2 W ) to the PA Speaker jack on the unit rear panel.
(12) NB switch

Activates the noise blanker circuit which is effective in reduction of impulse type noises (ignition noise, etc.).

## (13) ANL switch

Activates the automatic noise limiter in the audio. The ANL will be effective in reduction of atmospheric (discharge) interference.

## (14) RF Gain switch

Selects RF Gain (receiver sensitivity) of the transceiver in 3 ways:
DX. In this position, the receiver section provides maximum sensitivity so that it can pick up even weak signals.
Normally this switch should be placed in this position.
Mid. In this position, the receiver sensitivity is medium, and may be used when you desire to pick only strong or fairly strong signals.
Local. In this position, the receiver sensitivity is minimum, and the receiver will pick up only the strong signals. May be used when receiving strong (close) signals which are causing overload in receiving sound.

## (15) Meter

Serves to dual purpose:
When receiving, this meter gives the relative strength of incoming signals in 'S' units. When transmitting, this gives RF power output in lower scale.

## (16) Microphone jack

Accepts plug from the microphone supplied. The jack has a locating key inside and allows the plug inserted in only one way. Do not force the plug but align key way properly onto the jack.
(17) Microphone

Supplied. With transmit pushbar (PTT) mounted at the left side.

## Rear Panel Connection

(1) Antenna

Accepts a PL-259 type coaxial connector from the antenna lead-in cable.
(2) CW Key jack

Accepts a 3.5 mm 2 -conductor phone plug to connect a CW key.

## (3) External Speaker jack

Used to connect an external speaker ( 80 hm 4 W ) as an extra sound source. Inser-
tion of the plug from a speaker will silence the internal speaker automatically.
(4) PA Speaker jack

Used to connect a PA speaker ( 80 hm 4 W ) for PA operation.
Before operating PA you must first connect a PA speaker to this jack.
(5) $13.8 \vee$ DC jack
13.8 V DC power for the transceiver supplied through this socket (using DC power cable supplied).

## Fine Control Opeation

This control provides fine tuning of the receiver by $\pm 0.8 \mathrm{kHz}$. On regular AM or FM reception, this will permit slight adjustment of your tuning in cases where the received signal is slightly off-frequency. For SSB reception, this control is used as a voice clarifier by turning it for clearest, most intelligible voice.

## Coarse Tune Cantrol Operation

This control acts like a VFO (variable frequency oscillator) allowing inter-channel reception and transmission. This shifts the assigned center frequency of the channel 5 kHz up (when rotated clockwise fully) or down (when rotated counterclockwise fully). In the center position, the receiving and transmitting frequency is normal (as listed in the Frequency/Channel Chart).

## CW Operation

(1) Set the Mode selector to CW position.
(2) Connect a CW key to the CW Key jack on the rear panel.
(3) To transmit with Morse codes, simply operate the key.

Note. To transmit CW, you may not depress the transmit switch (PTT) on the microphone.

## Morse Codes

## Frequency/Channel Chart

| A-Band |  | B-Band |  | C-Band |  | D-Band |  | E-Band |  |
