

# CA3012

November 1996

# **FM IF Wideband Amplifier**

#### **Features**

- Exceptionally High Amplifier Gain
- Excellent Input Limiting Characteristics
  - Limiting Voltage (Knee) at 10.7MHz . . . . 600μV (Typ)
- Wide Frequency Capability:
  - Bandwidth...... 100kHz to 20MHz

# **Applications**

- FM IF Amplifiers
- FM Communication Receivers
- TV IF Amplifiers

# Description

The CA3012 is an FM IF wideband amplifier with 3 limiter gain stages in a bipolar monolithic technology. The pin 1 input is an open base and has a separate feedback bias. The feedback bias pin, DC FB BYPASS, is externally bypassed and provides the means for a tuned coil input to the IF IN pin. The output is a high impedance open collector which may be matched to a tuned transformer, driving an FM detector. Internal regulation circuits provide DC bias to the gain stages and DC feedback circuit.

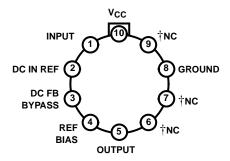

The CA3012 is intended for FM limiting applications requiring high gain.

# Ordering Information

# Schematic Diagram

# **Absolute Maximum Ratings** $T_A = 25^{\circ}C$

# 

# **Thermal Information**

| Thermal Resistance (Typical, Note 1)  | $\theta_{JA}$ (oC/W) | $\theta_{JC}$ (oC/W)                  |
|---------------------------------------|----------------------|---------------------------------------|
| Metal Can Package                     | 175                  | 100                                   |
| Maximum Junction Temperature          |                      | 175 <sup>o</sup> C                    |
| Maximum Storage Temperature Range .   | 65                   | <sup>50</sup> C to 150 <sup>0</sup> C |
| Maximum Lead Temperature (Soldering 1 | 0s)                  | 300°C                                 |

# **Operating Conditions**

Temperature Range ......-55°C to 125°C Supply Voltage Range (Typical) ......55°V to 10V

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

#### NOTE

1.  $\theta_{JA}$  is measured with the component mounted on an evaluation PC board in free air.

#### NOTES:

- 2. The total current drain may be determined by dividing  $P_T$  by  $V_{CC}$ .
- 3. Recommended minimum DC supply voltage (V<sub>CC</sub>) is 5.5V. Nominal load current flowing into terminal 5 is 1.5mA at 7.5V.

# Typical Performance Curves and Test Setups

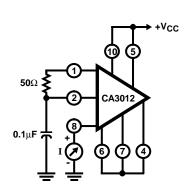

FIGURE 1. DISSIPATION TEST SETUP

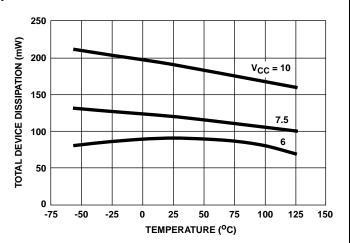

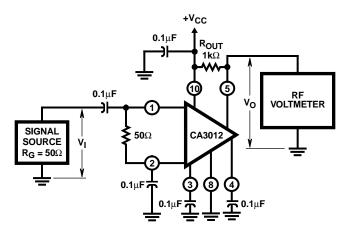

FIGURE 2. DISSIPATION vs TEMPERATURE

#### **Procedures**

- A. Voltage Gain
  - 1.Set input frequency at desired value,  $V_I = 100\mu V_{RMS}$
  - 2. Record VO
  - 3. Calculate Voltage Gain A from A = 20 log<sub>10</sub> V<sub>O</sub>/V<sub>I</sub>
  - Repeat steps 1, 2 and 3 for each frequency and/or for temperature desired
- B. Input Limiting Voltage (Knee)
  - 1.Repeat steps A1 and A2, using  $V_I = 100 \text{mV}$
  - 2. Decrease  $V_I$  to the level at which  $V_O$  is 3dB below its value for  $V_I$  = 100mV
  - 3. Record V<sub>I</sub> as Input Limiting Voltage (Knee)
