

DBL 5019

LOW POWER NARROW BAND FM IF

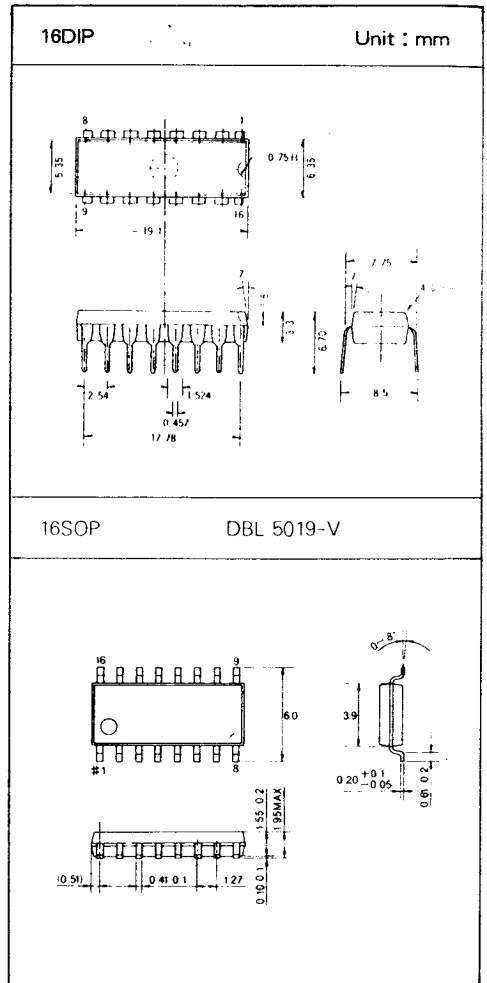

The DBL5019 performs single conversion FM reception and consist of an oscillator, mixer, limiting IF amplifier, and meter drive circuitry. These devices are designed for use in FM dual conversion communication eqpmetrn.

The DBL5019 is similar to the DBL5018 FM IFs, except that a signal strength indicator replaces the scan function controlling driver which is in the DBL5018. The DBL5019 is design for the use of parallel LC components.

This devices also requires fewer external parts than earlier products. The DBL5019 are availavle in dual-in-line and surface mount packaging.

FEATURES

- Wide operating Supply Voltage Range : $V_{cc}=2.0$ to $9.0V$
- Input Limiting Voltage Sensitivity of $-3.0dB(2\mu V)$
- Low Drain Current : $I_{cc}=3.2mA$, ($V_{cc}=4.0V$, Squelch off)
- Minimal Drain Current Increase When Squelched
- Signal Strength Indicator : $60dB$ Dynamic Range
- Mixer operating Frequency Up to $100MHz$
- Fewer External Parts Requirede than Earlier Devices
